# Fertis 90

**Use of Fertis as a foliar feed for management of sulphur deficiency**

**OILSEED RAPE**

An early spring spray gives useful growth promotion which often leads to an increase in the longevity of green leaf area and consequently increased yield.  
Rate of application: Apply Fertis 90 at 9 kg per hectare in 200-450 litres of water.  
Timing: Apply Fertis 90 during March at beginning of spring growth.

**GRASSLAND**

Yield promotion.  
Rate of application: Apply Fertis 90 at 9 kg per hectare in 200-450 litres of water.  
Timing: Hay or Silage: Apply Fertis 90 after the first or second cut ensuring there are at least two weeks between spraying and cutting.  
Grazing: Apply Fertis 90 from mid-June to mid-July. Allow at least 3 weeks after re-introducing stock.

**OTHER CROPS**

Cereals, Potatoes, vegetable brassicas, swedes, turnips, vegetables, vines, hops, turf, top fruit and soft fruit.  
Rate of application: Apply Fertis 90 at 9 kg per hectare in 200-450 litres of water.  
Timing: Apply Fertis 90 when the crop is actively growing and there is sufficient leaf area to absorb the spray. Spraying should be carried out on a calm day, but not during strong sunshine.  
Do not spray if rain is imminent.  
When sulphur deficiency is very severe, a repeat application should be made after 10-14 days.

**RESTRICTIONS:**

With apples:

**Varietal Tolerances**

Do not apply Fertis 90 to the following varieties: Belle de Boskoop; Lord Derby; Newton Wonder (some districts); Stirling Castle; Lane's Prince Albert; Cox's Orange Pippin; Beauty of Bath; Rival.

With Gooseberries

**Varietal Tolerances**

Do not apply Fertis 90 to the following varieties of gooseberries: Careless; Early Sulphur; Golden Drop; Leveller; Lord Derby; Roaring Lion; Yellow Rough.

**Contenido Neto:: 10 Kg**
